

Fact Sheet August 2023

Proposal overview

Goldwind Australia Pty Ltd is developing a planning application for the Baldon Wind Farm which will include a Battery Energy Storage System (BESS). Energy created through the wind farm would be stored within the BESS and would then feed directly into the energy grid.

The proposed Baldon Wind Farm would include:

- Approximately 150-200 wind turbines exporting power to the national electricity market (NEM)
- Associated infrastructure such as roads, drainage, cabling and substations
- Battery energy storage systems (BESS)
- Accommodation camp
- Operations and maintenance facilities

About the site

The proposed site is located 13km north of Moulamein, 55km east of Balranald and 75km southwest of Hay, NSW. The proposed site lies within the Murray River and Hay Shire Local Government Areas (LGAs) within the NSW South-West Renewable Energy Zone (REZ).

In July 2022, the Proposal moved into the Environmental Impact Statement (EIS) phase. As part of the EIS phase, we are seeking feedback from those who live and work in the area.

Key Benefits

Clean energy generation

The wind farm could generate the equivalent of the amount of electricity it takes to power over 700,000 NSW homes.

Clean energy storage

Provides reliable power for homes and businesses and brings stability to electricity network.

Income for the local area

The proposed wind farm would create jobs, diversify income and increase revenue to local services such as food, lodging and tourism.

Community Benefit Schemes (CBS)

Ongoing benefits for the local community would be available through CBS.

About the developer

Goldwind Australia are a leading wind power solutions provider in Australia and abroad, committed to sustainable development through balanced environmental projects across a wide suite of services.

Goldwind works alongside local communities to select and design projects that generate overall positive impacts on the community and environment.
